Software requirements specifition Glossary

Agreed Goal

We were given an initial project description that is agreed to by all stakeholders.

After several interviews and brainstorming sessions, we have revised project description that has been agreed to by all stakeholders.

There are still a few different (but overlapping) visions of what this project needs to achieve. When a single joint vision is agreed to, it will be hyper-linked from here.

environments

What is the system's physical environment?

- This system is a web server that will run on a machine in a co-located data center with 24x7 monitoring, UPS, air-conditioning, etc. Users of this system are typically at their offices.
- This application runs on hand-held devices that will often be used while the user is walking from one section of the warehouse to another. Lighting is good in that environment, but there are many noises and distractions.

What is the system's technology environment (hardware and software)?

- Win xp win 7 ,mac os ,linux

what is the web browser ?

- google Chrome , mozilla firefox , internet explorer 6 or higher , safari.

Stackehold / Actor

All

- All stakeholders share the following key needs: Security against abuses by other site visitors Convenient access to the site any time over the Internet

User

- User can be work with quizzes . they will be build their quizzes .

Key needs:

- Easily build , change database
- Work quizzes in web
- Report the point

User storied

- Manage quizzes
- We can be build may quizzed and set it in folder . we will have system folder and easily use it

Performance and capacity needs

- By the end of the first year of service, we should to reach the following system capacity:

  + 10000 users

  +100 user browsing the web site any given time
